CALL FOR APPLICATIONS FOR ADMISSION
GRADUATE STUDY PROGRAM "MASTER OF SCIENCE in DATA SCIENCE"

Full Time Program 2017-2018

Data Science is the study of data through computational and statistical techniques, in order to answer questions, develop explanatory and predictive models, perform analyses and communicate the results in revealing ways. Data science draws from a wide variety of disciplines such as computer science, artificial intelligence, statistics, economics, and operations research. It applies quantitative methods to uncover relationships in data drawn from business, medicine, financial, social or other domains. It is a key driver of improvements to all aspects of business, including strategy, operations, marketing, finance, and human resource management.

The Master of Science in Data Science, the first of its kind in Greece, offers students in-depth focus in data science while allowing them to tailor it their particular interests. Students will be interacting with diverse faculty members and other students, given the opportunity to complete innovative data science projects and be exposed to industry needs and real-life data science challenges.

The program focuses on computation and quantitative techniques and offers students new opportunities for building sustainable competitive advantage through data analysis. The part time program includes 21 months of taught courses and potentially a 3 month-long Analytics Capstone project that enables students to work on a real-world data-intensive problem using the tools and skills learned in the program.

The Informatics Department of the Athens University of Economics and Business

The program is offered by the Department of Informatics of Athens University of Economics and Business. The Department has been in existence, in its present form, since 1984 and is focused on providing innovative undergraduate and postgraduate education, along with research for the information and computing professions. Each year, we welcome approximately 200 undergraduate and over 100 graduate students. Faculty members have over 20 years of academic teaching experience on average and collectively have contributed more than 1,000 research publications, which have attracted over 10,000 references from other researchers worldwide. Furthermore, more than half of our faculty have been faculty members in leading American and other European Universities.

Athens University of Economics and Business (AUEB) was founded in 1920. It is considered one of the most competitive universities, at the European level, in the fields of Economics, Business Administration, Informatics, Statistics, Marketing, Accounting and Finance. AUEB was the first Greek University to establish postgraduate studies, at the Master’s as well as the doctoral level. Today it enrolls over 2000 students in 35 part-time and full-time Master’s level postgraduate programs with a duration of 1 to 2 years. It is the first university in Greece to receive the distinction of Excellence, according to the internationally accepted EFQM (European Foundation of Quality Management) Excellence Model, and it has also received the corresponding “Ever to Excel” Greek distinction. AUEB is by far the most international of Greek universities: It has the largest ratio of Erasmus students to its active student population, as well as a large number of undergraduate and postgraduate students participating in the Erasmus and Erasmus+ programs. It also offers one of the most active branches of AIESEC, through which it provides valuable opportunities for internships abroad.
Program’s Target audience

Excellent recent graduates, or midcareer professionals looking to upskill, with strong technical/math skills, from engineering, mathematics, statistics, finance, economics, operations research, and computer science. Prospective students get excited about gathering, measuring and analyzing information and want to focus on quantitative, computational methods to unlock the potential of data assets to reveal patterns, make predictions and improve decision-making.

Basic programming skills and facility with basic mathematical concepts and quantitative techniques are necessary. All applicants should have demonstrated academic success as evidenced by undergraduate courses and grades. The admissions committee considers the totality of a candidate’s experience, skills, personality and potential to reach a decision, aiming for a diverse class of motivated students who can most benefit from and contribute to our rigorous program of study.

Application process and admission requirements

The application period for the MSc in Data Science (Full-Time) for this academic year (2017-2018) is as follows: **April 27th, 2017 to May 25th, 2017**. The admissions committee may review submitted applications at any time and send acceptance/rejection letters earlier than the respective deadline. Acceptance letters will be sent out at the latest by May 25th.

Each application is required to include the following:

- Completed and signed application form with photo
- Copy of all university degrees/diplomas received
- Copy of transcripts of grades in Greek or English. Accepted candidates must submit official transcripts
- Certificate of equivalence for degrees from foreign Universities, issued by DOATAP (or proof that an application for certification has been filed -- admission is contingent on submission of certificate by September 2017).
- Proof of knowledge of English: Certificate of Proficiency in English from U. of Michigan/ Cambridge, TOEFL (at least 80), IELTS (at least 7), or other equivalent
- GRE scores (if available)
- Two recommendation letters
- Proofs of employment
- CV in English

Application fee of €25 to be deposited in National Bank of Greece, Account number: **110/001559-83**, IBAN number: **GR75 0110 1100 0000 1100 0155 983**. The application fee deposit is non-refundable.

The Program does not discriminate on the basis of race, color, religion, national origin, sex, sexual orientation, gender identity, age, genetics information or disability. Our nondiscrimination policy applies to all phases of its admission and scholarship process, and to all aspects of its educational programs and activities.
Applications are accepted until May 25th, 2017. Places are limited. Acceptance letters will be sent out at the latest by May 25th. Applications may be submitted in person or via mail at the following address:

Secretariat for Graduate Programs, Informatics Department, Athens University of Economics and Business, Evelpidon 47A & Lefkados, Athens 11362 Greece, 7th Floor, Office 707 (Monday-Thursday 12:00-14:00 and Friday 11:00-13:00, tel.: (+30) 210-82.03.860, Ms. Konstantina Chatzipanagiotou).

For clarifications and any other information, interested parties may contact the Secretariat or the Director via e-mail or phone. Information about the program can be found at [http://datascience.aueb.gr/](http://datascience.aueb.gr/).

**Program Structure**

The Full Time (FT) program is a 1-year program. Students need to complete 60 units of coursework, of which 40 units of core courses and 20 units of electives. Full courses are worth 5-7 units, half courses are worth 3 units. After completion of coursework, students undertake an intense 3-month integrated Capstone Project in collaboration with industry, with joint academic and industrial supervision, for 15 units.

Before the beginning of classes students are required to complete 1-3 preparatory courses in Statistics, Mathematics, and Computer Science, as decided by the Admissions Committee. Each course comprises 4 3-hour lectures and a final exam.

Attendance of lectures and laboratory sessions is mandatory. The maximum number of students per academic year is forty (40).

**Tuition Fees**

The Full Time (FT) program fees are €5500 (EU students)/€9000 (non-EU students), payable as follows:

- **Full-time program, EU: €5500**
  - €2000 upon enrollment in the Program (October 2nd)
  - €3500 to be paid by February 9th

- **Full-time program, other: €9000**
  - €3000 upon enrollment in the Program (October 2nd)
  - €6000 to be paid by February 9th

Tuition fees are non-refundable. A limited number of merit-based scholarships is available.

** Athens, 27/04/2017**

Rector

Professor Emmanouil A. Giakoumakis
Additional Information - Curriculum

Core courses:

**Probability and Statistics for data analysis (6 units)**

Basic principles of Probabilities. Basic theorems in Probability e.g. law of large numbers, the Central Limit theorem etc. Common probability distributions. Principles of statistics. Data summarization. Statistical inference and causality, Experimental design and sampling methods, Estimation and hypothesis testing. Bootstrap and variants.

**Practical Data Science (6 units)**

The course gives students a set of practical skills for handling data that comes in a variety of formats and sizes, such as texts, spatial and time series data. These skills cover the data analysis lifecycle from initial access and acquisition, modeling, transformation, integration, querying, application of statistical learning and data mining methods, and presentation of results. (The course is hands-on, using python, in iPython interactive computing framework.)

**Large Scale Data Management (6 units)**

Methods and techniques for database design and management, operational data management and transaction processing, data warehouse creation, and information retrieval. New approaches for storage and querying (column stores, NewSQL) will be discussed and experimented upon. Management of large scale structured and unstructured data in different information systems environments.

**Machine Learning and Computational Statistics (7 units)**

**Numerical optimization and Large Scale Linear Algebra (6 units)**

Floating point arithmetic; Stability of numerical algorithms; Norms; Fundamentals of matrix theory; Solution of systems of linear equations: direct methods, error analysis, structured matrices; Iterative methods for linear equations and least squares; Eigenanalysis; important matrix factorizations and their algorithms. Application to case studies.

**Data visualization and communication (6 units)**

Communicating clearly and effectively about the patterns we find in data is a key skill for a successful data scientist. Visualizations are graphical depictions that can improve comprehension. Collaborative filtering Visualizations will be paired with verbal analyses and reporting. Different tools will be used to transform
data and create visualizations, including Python, Google Charts, Tableau, and Spotfire. Assignments will give students experience with reporting on complex patterns and results with graphics and prose.

Legal, ethical and policy issues in data science (3 units)

Discusses issues of privacy, surveillance, security, classification, discrimination and decisional autonomy from a legal, ethical, and policy perspective (whether business or public policy). Areas of relevance include health, marketing, employment, law enforcement, and education.

Electives (indicative list):

Data mining (6 units)

Bayesian Statistics and simulation methods (6 units)

Advanced Large Scale Data Management (5 units)

Distributed and parallel data-oriented computation and transaction processing. Integration and management of large scale structured and unstructured data in different information systems environments.

Big Data Systems and techniques (3 units)

Cloud services, engineering issues, stream processing, graph processing, Cassandra, Dremel, Pregel, Storm, parallel data mining systems (Graph Lab, Mahout).

Statistical methods for Big data (3 units)

Time series and Forecasting methods (3 units)

Optimization (5 units)

Convex and semidefinite optimization (Convex sets and functions, Problems, duality, unconstrained and constrained minimization), Combinatorial optimization (Branch and bound, tabu search, Simulated annealing), Multivariate function optimization (e.g. gradient descent). Linear Programming (Formulations, Algorithms).
Text analytics (6 units)

Language models, text normalization. Applying feature extraction, classification, sequence labeling algorithms (e.g., PCA, naive Bayes, logistic regression, SVMs, HMMs, CRFs) to texts (for document classification, entity recognition etc.). Parsing (CKY, Earley, probabilistic CFGs). Semantics (logic-based, distributional, word embeddings, sense disambiguation) and discourse analysis (co-reference, rhetorical relations). Machine translation. Information extraction (incl., relation extraction) and sentiment analysis. Question answering. Text summarization. Concept-to-text generation. Speech recognition fundamentals.

Data science and optimization for operations management (5 units)

Overview of basic concepts from operations management: Process Analysis, queues, inventory management, revenue management. Demand Forecasting. Inventory/Replenishment Optimization. Lead Time Analysis. MRP/Production Planning. Fleet Allocation. Route Optimization

Marketing data science (6 units)

Data Science for medicine (3 units)

Information retrieval (3 units)

Data curation (3 units)
